BRYTER ACADEMY

By completing the **BRYTER Learning Program** and achieving the designation of a **Certified BRYTER Author**, Paul Matkey has demonstrated their ability to design and build sophisticated applications using the BRYTER platform and their expertise in the following competencies:

 **More Fundamentals:** Paul Matkey can effectively assign values to Single Select answer options, group nodes for logical structuring, update variables to manage data flow efficiently, create risk scores for assessments, construct intricate conditions, and develop logic based on Multiple Select nodes.

 **Automatic Document Generation:** Paul Matkey has mastered BRYTER document automation techniques. They can collect user responses for document generation and dynamically adjust document content based on user input. Moreover, they can create tables with variable row counts and use conditional content for complex documents.

 **Case Management & Databases:** Paul Matkey can collect and store data on the BRYTER platform, display data contextually for specific audiences, and build modules that can take action based on stored data, such as approvals or rejections.

 **Access Management for Applications:** Paul Matkey can filter data views for tailored record displays, configure application parts according to specific roles, and connect databases using Excel files.

 **Collections:** Paul Matkey can import and organize database entries as collections, perform calculations with collections, enable user selection from collections, and create dynamic tables in documents.
